Internal note

Can you get the client machine joined to corplab.local so users can start login in with their domain accounts instead of local ones?

Internal note

Set the clients machine's preferred DNS to the DC private Ip (172.31.11.160). Joined via Add-Computer - DomainName "corplab.local" -Credential (Get-Credential) -Restart. Verified computer object appeared in AD (dsa.msc, default Computers container). Confirmed domain logon with jsmith account.

Client machine is joined to the domain and confirmed working, domain accounts can log in directly.
