Internal note

We need a Windows domain controller stood up so we can start centrally managing user accounts instead of local logins on each machine. Can you get this provisioned and confirm it's healthy?

Internal note

Provisioned domain-controller-lab (Windows Server 2022, t3.medium) on EC2, static private IP 172.31.11.160. Installed AD DS role and promoted to a new forest (corplab.local) via
Install-WindowsFeature -Name AD-Domain-Services -IncludeManagementTools

Install -ADDSDForest -DomainName "corplab.local" -DomainNetBiosName "CORPLAB" -InstallDNS
Was installed in safe administrator mode with a password.

Verified with Get -ADDomain
Get -ADForest
dcdiag /v
